In the United States District Court for the District of Connecticut

In re: Case of Purified Water; Arrowhead Recall v. Blue Triton v. PRIMO HA-6-5-26

United States v. Lee Zeldin 42USC§300i-1(c)

By Anthony J. Sanders
Hospitals & Asylums

Kroger 9.5 pH Alkaline Purified Cincinnati TapWater, Alka 65 filtered Las Vegas tapwater and Arrowhead Mountain Spring from multiple sources in California, unless the point source pollution can be positively identified with the bar code 71142333416, and Vibrio contaminated Starkist Smart Bowls are imminently hazardous consumer products condemned to be recalled under 15USC§2061. Following their merger with BlueTriton Brands, who bought Nestle Waters North America in 2021, in late 2024, PRIMO is the largest seller of bottled water in the USA and commands roughly 19% of the U.S. bottled water market. Arrowhead, Blue Triton and PRIMO are incommunicado online. The Stamford, Connecticut 06902 Blue Triton corporate headquarters burden the bailiff, with the appellation of the origin of their purified, reverse osmosis filtered, drinking water pursuant to Common Regulations under the Lisbon Agreement and the Geneva Act of the Lisbon Agreement (2023).

Torture 18USC§2340A

Trust Fund 24USC§419

War crime 18USC§2441

Dear Bailiff:

Due to fiscal year 2026 EPA deregulation of “purified” bottled water in the United States, it is

medically necessary for the Court to provide thirsty defendants and jurists with expensive “vapor distilled” Smart Water ® with electrolytes added for taste. Otherwise is torture, without a divine guide to natural water that is not too polluted to filter and bottle for sale. To provide voluntary and involuntary consumers with affordable potable water, jails, households and commercial beverage sellers, must either contract a bottled water company protected natural source of sufficient quality to reverse osmosis filter or lead urban designers to install energy and infrastructure expensive vapor distillation and electrolyte processors in certain kitchens, to procure truly potable water from saltwater and sewage, separating the brine waste from the distilled H₂O and adding electrolytes for tasteful digestion that fulfills the human right to a solid stool without any constipation, senility or nausea.

Municipal tap-water and commercially bottled water are due jury trials of consumers complaints to determine whether or not the locally available water sold in stores and municipal utility bundles by the one gallon, per sober test subject, per day, is truly potable for drinking, cooking and coffee percolation, when treated with reverse osmosis filtration. Although, below the un-mined, mountain wilderness, some rainy, high elevation, small, village tap-water, and protected aquifer well-water, is truly potable with filtration, to avoid all sewage contamination by leaky underground pipes, a bottling company would need to be located at the same pristine natural reservoir, the lucky municipality uses, or privately protect a good source, spring or well, with a bottling company, who is morally obligated to prosecute saturation of regional demand for safe bottled water for drinking, cooking and coffee water, before marketing the bottled water interstate or internationally, due to the extremely limited volume of potable water nature can sustainably provide, in unpolluted, arid and semi-arid areas.

Purified water, bottled and sold in the United States, has come under international sanction, and cannot be granted any export permits, until the United States Environmental Protection Agency (EPA) elects an Acting Administrator to propose to pay the World Intellectual Property Organization (WIPO) International Bureau appellation of origin application processing fee, incidental to the sentencing of the Venezuela and Iran war criminal Lee Zeldin for tampering with public water system in terrorist, war criminal, biological experimentation violation of the Safe Drinking Water Act of 1974 42USC§300i-1. Zeldin attempted to cut the fiscal year 2026 EPA budget in less than half, although drinking water is so critical to human life expectancy and health, drinking water must be construed an essential service 10USC§1580 and any budget cuts to the public drinking water system are considered terrorist attacks against the United States (civilian population by a US military war criminal). Firing Zeldin right now seems to be exactly what the career hypocrite, an Iraq war Lt. Col., half-paid for FY 26, under 24USC§419(a)(4) and 42USC§300i-1(c), if the negligent, disqualified, former EPA Administrator, is to avoid being sentenced 20 years to life, with possible death sentence, like one of the many common water poisoning veterans torturing this Jew's email inbox 18USC§2340A with biological 18USC§175 et seq, chemical 18USC§229 et seq, war crime 18USC§2441.

There can be only one source for any bottle of purified water, on the label to be appealed, or cross-contamination must be presumed under Arts. 5 and 6 of the Common Regulations under the Lisbon Agreement for the Protection of Appellations of Origin and Their International Registration and the Geneva Act of the Lisbon Agreement on Appellations of Origin and Geographical Indications (as in force on July 14, 2023). An appellation of origin is a special kind of geographical indication generally consisting of a geographical name or a traditional designation used on products which have a specific quality or characteristics that are essentially due to the geographical environment in which they are produced. Labelling regarding the exact geographical source of purified water is essential to procuring potable water because only unpolluted, quality, natural sources can be made potable with reverse

osmosis filtration. Every irregular purified water application on the market must be recalled if the improperly bottled water causes diagnosable medical disease, ie. Diarrhea from Cincinnati tap-water petro-chemicals, *E. coli* Shiga neurotoxin senility from Las Vegas tap-water, belly-ache from Arrowhead spring labelling mania to be treated today with Smart Water, after being senilely ripped off by the Reservation Gas station cashier who informed me the Reservation Willow Creek Water they, the Pueblo, but not the town of Taos, use is potable without filtration and could certainly be filtered from the faucet etc. In the case of purified water, Competent Authorities are burdened with verifying a geographical list of safe drinking water sources, wells and springs, that are ruled potable with reverse osmosis filtration, and may be commercially bottled or otherwise sold as purified water, prioritizing saturation of locally enforced demand for potable water for drinking, cooking and coffee percolation, pursuant to land grants from different states by United States District Courts under 28USC§1354.

My divine right to rule whether or not POTUS is potable, is granted on the basis of fairly reliable temporary relief from lockjaw from antioxidants to metabolize the iron deposited from *C. tetani* contaminated rusty spigot that has dislocated my right temporo-mandibular joint (TMJ) since the Feb. 20 conjunction of Neptune and Saturn at zero-degree Aries, easily interpreted by the direct above naked eye observation of Jupiter in the center of Gemini, waiting for Orion, Neptune, Saturn and Andromeda, banging on the Big Dipper, to bag a Ram for the feast. In *Totipotent Freshwater Sargassum Theory: United States v. Lee Zeldin, Administrator of the Environmental Protection Agency* [HA-28-2-26](#) the Apache held the EPA Administrator is a war criminal under 18USC§2441. In *Santa Fe to Taos Trail; Bottled Sangre de Cristo v. Gallon of Kroger 9.5 pH Alkaline Purified Water* [HA-29-4-26](#) it was held, to sell their tasty, but diarrheal, gallon of water pursuant to the first reading of the Safe Drinking Water Act of 1974 under 42USC§300g(3) Kroger is ordered to either change the presumed source of their reverse osmosis and chemical treated water from the Ohio River to the Great Miami Buried Valley Aquifer or invest in expensive vapor distillation desalination technology pursuant to the same land grants from different states jurisdiction New Mexico seeks to bottle the Sangre de Cristo for sale to Rio Grande valley households, cafes, restaurants and grocery stores pursuant to 28USC§1354. In the appellation of origin pertaining to *Red Rock and Silver Springs Water Companies et al v. Alka 65 Restore and Hydrate Electrolytes Bottled in Las Vegas* [HA-1-5-26](#) it was held, sellers of reverse osmosis filtered “purified” water must advertise their prudent selection of a natural source pursuant to the Safe Drinking Water Act of 1972 42USC§300g(3). Furthermore, an 85 year old alcoholic, who drinks bottled water in the Rio Grande valley, with his young, beautiful and short-tempered wife, who had to pick him up at a different library than the one he probably lost his car at, described his Alzheimer's symptom as a 'mental fog' to exactly describe the primary human test subject detectable Alka 65 symptom, amongst other crucifying aches, best attributed to *E. coli* Shiga neurotoxin from Las Vegas tap-water that passes through the reverse osmosis filter, resulting in the remote condemnation of Las Vegas Municipal Water.

Today, my Arrowhead Mountain Spring Water abused belly-aches to appeal the origins of the largest seller of bottled water in the United States, whereas the bottled water industry is not only 3,500 times more environmentally damaging than tap-water, purified bottled water from sources that are too contaminated to be filtered, have posed a serious public health risk since 2025. Following their merger with BlueTriton Brands in late 2024. PRIMO commands roughly 19% of the U.S. bottled water market. Primo Brands operates a vertically integrated coast-to-coast network that distributes its brands to more than 200,000 retail outlets, as well as directly reaching consumers through its Direct Delivery, Exchange and Refill offerings. Through Direct Delivery, Primo Brands delivers responsibly sourced hydration solutions direct to home and business customers. Through its Exchange business, consumers

can visit approximately 26,500 retail locations and purchase a pre-filled, multi-use bottle of water that can be exchanged after use for a discount on the next purchase. Through its Refill business, consumers have the option to refill empty multi-use bottles at approximately 23,500 self-service refill stations. It is important to note that self-service refill stations using PRIMO or other company reverse osmosis filters at grocery or other stores, can only be allowed if a competent authority rules the municipal tap-water it uses is truly potable with reverse osmosis filtration, toxic and chemical contaminants pass right through. PRIMO Brands are: Arrowhead, Canadian Springs, Deer Park, Ice Mountain, Kentwood Springs, Labrador Source, The Mountain Valley Spring Water, Ozarka Proudly Texan, Poland Springs, PRIMO Water, Pure Life Healthy Hydration, Saratoga Spring Water, Sparkletts, Splash Blast, Splash Refresher, Zephyrhills Natural Florida Spring Water.

PRIMO Brands must identify the geographical source of every bottle of purified water they reverse osmosis filter and sell and verify that it is potable. Arrowhead, Blue Triton and PRIMO are incommunicado online, even the Arrowhead telephone number didn't work on the first click. PRIMO does all their business in their regional distribution centers corporate purchasers have to go to, instead of driving to the nearest potable natural source of water, filtering and bottling it themselves. PRIMO does not exhibit a physical address. Therefore the Stamford, Connecticut Blue Triton corporate office at 900 Long Ridge Road, Building 2, Stamford, CT 06902, United States burdens the bailiff for the United States District Court for the District of Connecticut, with the appellation of origin of their purified drinking water from many different sources across the country, that is failing every taste test, after many days of Arrowhead Mountain Spring Water pass, followed by one day of Pure Life Deep Protected Well in Texas pass, walking passed PRIMO self-service filter in Taos certain failure. Suddenly today, I took pictures of several PRIMO brands that were all advertising multiple (myeloma) sources for each bottle of water, that is presumed to be all contaminated.

The One gallon Arrowhead bottle that abuses my abdomen to this liter of Smart Water claims to be proudly sourced in California from Southern Pacific Spring, Riverside Cty; Arrowhead Springs, San Bernardino Cty; Long Point Ranch, Running Springs; Palomar Mountain Granite Springs, Palomar; Deer Canyon Springs, San Bernardino Cty, and/or Coyote Springs, Mono Cty. Bluetron Brands, Inc. Stamford CT 06902, copyrighted 2022. For questions or report on water quality and information contact 1-800-873-7773 or arrowhead.com. What is the exact source of bar code 71142333416? beginning 0 and ending 2 omitted.

One gallon Texas Spring Water est. 1905 Ozarka Brand Proudly Source in Texas: Piney Woods Spring, Wood Cty; Moffit Spring, Walker Cty; Roher Spring, Henderson Cty; Saryu-Eleanor Spring, San Jacinto Cty; and/or Cartwright Springs, Jasper Cty. Copyrighted Blue Triton Brands, Inc. 2025.

One Gallon Pure Life Distilled Water (is a trick) for use in small appliances that require the use of distilled water, vapor distilled water requires the addition of electrolytes to taste, in order to be truly potable, exactly like Smart Water. Blue Triton Brands Inc. Stamford, CT 06902. Sources: Deep Protected Well, San Bernardino County, CA; Deep Protected Well, Riverside County, CA and/or (sticker shock) Public Water Supply, Sacramento, CA. Purified by Steam Distillation. For questions or to report on water quality and information contact 866-599-8980.

One liter Pure Life. Ingredients Purified water, less than 0.5% of calcium chloride, sodium bicarbonate, magnesium sulfate. Blue Triton Brands, Inc. Stamford, CT 06902. Source: Deep Protected Wells Stanwood, MI. Purified using reverse osmosis or distillation. Best buy from a

reservation store whose reservation tapwater is potable with reverse osmosis filtration in an otherwise contaminated city.

One liter Essentia is the only product known to continue to be distributed by Nestle USA, Inc, in Arlington, Virginia, since the Blue Triton purchase of Nestle Waters North America, in 2021. Essentia Arlington headquarters were subjected to the same Potomac sewage leak that slew the Ayatollah Khomeini and my uncle Stan in the Netherlands who died of disseminated intravascular coagulation (DIC) to the brain in the 24 hours between me learning of his leukemia = common water mold and him receiving my email treatment with one dab of hydrocortisone crème to location and daily clotrimazole athlete's foot crème to location and feet. Essentia water has always been good to me, although it does not come in gallon size discount, nor is the appellation of origin in Arlington, VA sufficient guarantee of a quality natural source for reverse osmosis filtration, short of vapor distillation. Essentia is presumed to continue to be good despite the Potomac sewage leak that psychologically tests the “proprietary ionization process removing bitter tasting acidic ions, delivering a 9.5 pH or higher with a clean, smooth taste” without distinguishing whether their “purified water” is truly reverse osmosis filtered and requiring the appellation of origin of a decent natural source, the Potomac is not, and never was, or secretly vapor distilled, not believed. Ingredients purified water, sodium bicarbonate, dipotassium phosphate, magnesium sulfate and calcium chloride. For more information on water quality and pH quality guarantee, contact 877-293-2293, essentiawater.com

The term “imminently hazardous consumer product” means a consumer product which presents imminent and unreasonable risk of death, serious illness, or severe personal injury pursuant to the Consumer Product Safety Act of 1972 under 15USC§2061 as referenced by the Safe Drinking Water Act of 1974 that did not anticipate any recalls of anything but lead lined water coolers with lead lined tanks in 42USC§300j-22. To recall a bottled water product the Consumer Products Safety Commission lawyers, eg. Bailiff, must file a petition in the United States District Court in any District where the defendant does business to have the United States District Court declare any product an imminently hazardous consumer product. The United States District Court may grant such temporary or permanent relief as may be necessary to protect the public from such risk, eg. Protected land grants for wells and springs presumed to be potable with reverse osmosis filtration 28USC§1354. Such relief may include a mandatory order requiring the notification of such risk to purchasers of such product known to the defendant, public notice, the recall, the repair or the replacement of, or refund for, such product.

Kroger 9.5 pH Alkaline Purified Cincinnati TapWater, Alka 65 filtered Las Vegas tapwater and Arrowhead Mountain Spring from multiple sources in California, unless the point source pollution can be positively identified with the bar code 71142333416, are condemned to be recalled under 15USC§2061. These three brands are “imminently hazardous consumer products” that must be recalled to protect the public health and welfare. Pure Life Vapor distilled bottled water might also want to be recalled because it is not enough to educate the public regarding the deceptive practice attempting to sell vapor distilled water to thirsty customers, without first adding electrolytes to taste, that would make the vapor distilled water potable, and should add a tasteful amount of electrolytes, before rebottling, recosting and relabelling the gallon of Pure Life Vapor Distilled water, and any other milk jugs of vapor distilled water on the market, with electrolytes added to taste.
