Don't Pandemic Treaty HA-16-9-22

Preamble

- Art. 1 [Diagnosis](#)
- Art. 2 [Water](#)
- Art. 3 [Essential Oils of Eucalyptus, Lavender or Mint Aromatherapy](#)
- Art. 4 [Eucalyptus and Echinacea Products](#)
- Art. 5 [Corticosteroids](#)
- Art. 6 [Drug Resistance Propaganda](#)
- Art. 7 [Office Opening Protocol](#)
- Art. 8 [Immunization](#)

Preamble

Acknowledging the gold standard for the diagnosis and treatment of coronavirus colds is hydrocortisone, eucalyptus, lavender, peppermint or salt helps water cure coronavirus allergic rhinitis.

Advertising that mentholypus cough drops (containing eucalyptus) cure both the persistent wet cough of influenza and severe acute respiratory syndrome (SARS) from coronavirus.

Submerging the head in water, especially saline and chlorine water, instantly cures coronavirus colds.

Prescribing mentholypus cough drops or echinacea pills cures severe acute respiratory syndrome (SARS).

Prescribing Echinacea to cure Respiratory Syncytial Virus and triple threat of RSV, SARS-CoV-2 and Flu

Resolving to cure coronavirus while cleaning surfaces and floors with Lysol.

Buying eucalyptus scented humidifiers to sterilize public airspaces in schools and hospitals.

Grieving an estimated 598 million confirmed cases and 6.4 million deaths from COVID-19 worldwide and 93.7 million confirmed cases and 1.04 million death in the United States, more than any other nation as of August 25, 2022.

Recognizing the World Health Organization (WHO) has declared the official name of the coronavirus disease as COVID-19, and named the virus severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).

Redressing the retaliation of the WHO against effectively treating the coronavirus by means of unleashing a novel monkeypox pandemic, prescribe poultices seeped in purple pitcher plant to cure monkeypox, smallpox, poxyvirus, pappillomavirus and related carcinomas.

Condemning the fact that the official differential diagnosis and symptoms are intentionally flawed so

that people do not “nose to diagnosis” coronavirus instantly, perpetuating the myth of the asymptomatic patient, deceptively advertise patently inaccurate diagnostic PCR tests, that are unable to distinguish coronavirus and flu, and subsidize production of deceptive vaccines, that cure in two weeks for an instant, while useful to prevent severe illness and death in clinical and hospital admissions not so used, these official measures do not generate the herd immunity that is needed for the human race to end the deadliest coronavirus pandemic in history and deadliest pandemic in US history – a snuff flick.

Fearing more the consequences to self and others of not being heeded, more than being beheaded, preach the gospel truth that baptism cures coronavirus colds the instant the head is submerged in water (John 1: 26)(Luke 3: 7)(1 Peter 3: 21)(Mark 6: 24).

Believing hydrocortisone, eucalyptus, echinacea, lavender, peppermint or salt helps water cure coronavirus colds and severe acute respiratory syndrome (SARS).

Have agreed to the following.

Art. 1 Diagnosis

A. Know to diagnosis coronavirus infection in self and others by the nose. The nostrils immediately become inflamed when exposed to airborne coronavirus. Inflamed nostrils indicate a contagious state whereby anyone within about two meters is or will be certain to get infected. These nasal symptoms traditionally indicate either a viral cold, or if it lasts more than a week, allergic rhinitis. Allergic rhinitis can be caused by caused by contagious viruses or environmental mold allergies, that are not time limited like rhinovirus. Coronavirus is a cold virus that descends to the lungs after a few days and is not time-limited. Untreated severe acute respiratory syndrome (SARS) patients die before the infection becomes a chronic disease after six months. Most people recover from minor infections in isolation after sweating, washing or sleeping.

1. Coronavirus is virtually the only cold virus circulating these days and is likely to co-infect any other respiratory infection. The differential diagnosis is with influenza, rhinovirus, adenovirus, respiratory syncytial infection, pertussis and pneumonia. Coronavirus is the only cold with effective treatment. Influenza is diagnosed by persistent wet cough, that leads to fever and fatigue, if untreated, flu does not infect the nose. During the pandemic, any influenza, cough or sneeze, for any reason, is likely to concurrently spread coronavirus. Mentholiptus cough drops, that contain essential oils of eucalyptus, are cheap, tasty and cure both influenza and coronavirus. Neither influenza or COVID vaccines are effective. Pertussis causes a week of extremely runny nose, that can sometimes be cured with antibiotics, before it descends to the lungs for six weeks of whooping cough. Pneumonia causes a dry cough, ear infection and meningitis, Ampicillin for Azythromycin resistance, is avoided with highly effective Pneumovax inoculation.

2. The asymptomatic patient is a myth, there is no incubation period, the instant the nose becomes inflamed the patient is contagious and the instant the discomfort in the nose is gone the patient is healed and is not infective. There is contagious unease whenever there is any coronavirus related nasal discomfort whatsoever. The problem is that health care professionals are infected the entire time they are working with a contagious nose and, without necessarily possessing any curative medicine, are trying to triage themselves and patients to prioritize the admission of potentially deadly severe acute respiratory syndrome (SARS).

B. Currently there are two types of diagnostic tests – molecular (RT-PCR) tests that detect the virus’s

genetic material, and antigen tests that detect specific proteins on the surface of the virus. Samples are typically collected with a nasal or throat swab, or saliva collected by spitting into a tube. PCR tests have been cited for being unable to distinguish between coronavirus and influenza, that will both cause a positive result. Antibody tests should not be used to diagnose an active coronavirus infection, they are useful at identifying new genetic strains, tracked by the news media. There is a margin of error in testing. There is a high risk positive tests result from being transiently infected by patients and staff at a testing center. No one knows coronavirus like the nose.

Art. 2 Water

Washing the nose and face with water is necessary to activate any curative coronavirus treatment. Submerging the head in water instantly cures coronavirus allergic rhinitis. This is however rarely convenient. Standing water should not be excessively infected with coronavirus. Water is not adequate cleaning solvent, although it is often enough to redress minor environmental contagiousness. The bath water does not need to be particularly clean, saline, mineral or chlorine to be effective. All pollution is anathema, human waste inflames the nostrils almost exactly like coronavirus. Mineral, saline and chlorine water is particularly helpful for curing obstinate or serious infections and sterilizing surfaces, however Lysol aromatherapy is so curative of the hygienist and anyone within two meters, no other water based cleanser has been approved by the FDA to advertise it kills coronavirus. It is interesting to note that an Epsom salt bath, saline or chlorine swim cures topical and musculoskeletal methicillin resistant *Staphylococcus aureus* (MRSA) that cannot be cured with water alone. Swimming in a saline or chlorine pool is the ideal cure for COVID and MRSA. For COVID the most important thing is that the head is submerged so that the hair is cleaned and the nostrils are completely filled with water. Showers are less effective because the nostrils are not instantly cured when they fill with water, but usually do the trick, especially with medicated soaps. Although washing the face and nose greatly reduces contagiousness, merely washing the nose and face with medicated soap usually takes two tries to completely cure.

Art. 3 Essential oils of eucalyptus, lavender or mint aromatherapy

A. Essential oils of eucalyptus, lavender and peppermint have long been known to cure allergic rhinitis. They are all effective against coronavirus and common mold allergens. Eucalyptus and lavender cure influenza. A drop is topically applied with the index finger to the exterior of the nose and upper lip. Although relieving, topical essential oils and sprays are not usually effective until washed off with water and intentionally spraying the nose and face can irritate the nostrils. Menthol is a common medicinal ingredient made from mint that cure coronavirus. Menthol flavored cigarettes are a highly effective preventive and curative treatment for coronavirus, more due to the habitual nature of consumption than potency. Essential oils of eucalyptus, lavender and mint are essential ingredients in oral medicines, teas, soaps, cleaners, candles targeting coronavirus.

1. Eucalyptus scented humidifiers are probably the highest level of technology that is needed to end the coronavirus pandemic. Public airspaces, like schools, hospitals and indoor parties require eucalyptus scented humidifiers, also known diffusers, to be deployed to prevent and respond to coronavirus and influenza pandemics. As noted, water is highly effective at treating coronavirus although water alone does not kill coronavirus. Humidifiers alone have been determined to be 50 percent effective at eliminating coronavirus. Air purifiers have been noted by astute observers to make air quality worse, so that the nose is definitely slightly irritated, air filters are unlikely to completely screen viruses and the contaminated device is thought to actually spread the virus. Eucalyptus aromatherapy is curative of both coronavirus and influenza. Eucalyptus scented humidifiers were a

widely used home-remedy in the 1950s. Essential oil of eucalyptus scented humidifiers are a must for local institutions.

Art. 4 Eucalyptus and Echinacea products

A. The active ingredient of Lysol is eucalyptol, an essential oil of eucalyptus. Although the EPA produced a long list of cleansers, mostly containing deadly ammonia, it omitted Lysol, and is held responsible for the deaths of school custodians. The reason Lysol is the only cleanser approved by the FDA to kill coronavirus is because it works. The Eucalyptol solution not only kills environmental coronavirus, the aromatherapy cures the hygienist and everyone within two meters. Lysol disinfectant sprays cures environmental coronavirus, but the aerosol irritates the nose, and spraying the bed or worse cat-bed can cause back ache and potentially kidney failure and death. Lysol detergent is highly effective for cleaning clothes and bedspreads. Water soluble Lysol disinfectant is the most highly recommended formula for mopping and cleaning surfaces with a spray bottle. The trick to being cured by Lysol, is not to intentionally spray oneself in the nose and face because this irritates the nostrils, the cleaning spray or mop water must be used as directed to be healed by the aromatherapy.

1. Mentholiptus cough drops cure both coronavirus and influenza. Mentholiptus cough drops are cheap, tasty, readily available and highly effective at curing coronavirus. Mentholiptus cough drops are best at preventing, treating and curing severe acute respiratory syndrome. One must wash their nose with water after consuming a mentholiptus cough drop to cure coronavirus allergic rhinitis, with significantly better effect than water alone. It is vital to make sure the mentholiptus cough drop preparation actually contains eucalyptus. The medicinal ingredient in the basic formula is menthol, made from mint. Eucalyptus adds to the cool-refreshing mint flavor. Menthol cures coronavirus but doesn't cure influenza. Eucalyptus is the most effective herbal remedy for both coronavirus and influenza. A mentholiptus cough drop is a highly effective remedy for both the wet cough of influenza and fluid fill lungs of coronavirus. A mentholiptus cough drop may cause some coughing because it stimulates salivation, but this should not impair the cure more than a few minutes. Wash the nose after consuming a mentholiptus cough drop to completely eliminate the coronavirus contagion.

B. Echinacea is the key ingredient in a number of herbal respiratory health preparations. Echinacea has been proven in numerous scientific studies to cure influenza and coronavirus. Only a small quantity of echinacea is needed to cure coronavirus or influenza, a couple of purple cone-flower petals is sufficient for a dose. Echinacea pills and tea have been known to rescue coronavirus patients near death from fluid filled lungs, and enable them to make a complete recovery, as well as cure common coronavirus allergic rhinitis. The tea is tasty but a little hard on the digestion.

Art. 5 Corticosteroids

A. Corticosteroids are the definitive medical treatment for coronavirus and mold allergies. For Severe Acute Respiratory Syndrome (SARS), a coronavirus, the treatment with no fatalities was to ventilate the patient and medicate with the antibiotic levofloxacin (Levaquin), and corticosteroids methylprednisolone IV and then prednisone. People on daily high dose corticosteroids, such as transplant patients, are completely oblivious to coronavirus allergic rhinitis, to the point where they have never experienced the symptoms and have social phobia. Cushing's disease is a non-life threatening side-effect of excessive life-saving corticosteroid use, its symptoms are fragile bones and puffy cheeks, and may be a lead culprit in the high rates of total knee and hip replacement surgeries in industrialized nations. The non-prescription of corticosteroid inhalers to first time asthma patients, to push dangerously ineffective salbuterol, is certain to be a leading cause of the dramatic rise in

asthma and allergy patients over the past few decades. However, even curative nebulizing inhalers and nasal sprays are irritating in their own right.

1. Hydrocortisone crème is a corticosteroid that is accessible over-the-counter, for as little as a dollar a tube. When a dab is applied topically to the exterior of the nose, hydrocortisone creme instantly cures coronavirus and allergic rhinitis due to mold. Two dabs of hydrocortisone crème can also be applied to the chest to treat both severe acute respiratory syndrome (SARS) from coronavirus and the carcinogenic lung nodules of pulmonary aspergillosis. The dose of corticosteroid in hydrocortisone crème is much lower than other corticosteroid preparations and should be below the threshold of Cushing's disease, however it has the potential to cause Cushing's disease and should not be chronically used. When misused to treat a disorder that it does not cure, other than coronavirus or aspergillosis, hydrocortisone invariably causes mild Cushing's disease.

2. It is held that hydrocortisone crème is a safer allergy and asthma medicine than higher dose inhaled, intranasal or oral corticosteroids, hydrocortisone is reliable and available over-the-counter. Corticosteroid inhalers and intranasal preparation are curative, but may dangerously irritate the lungs and nose. Nonetheless, because corticosteroids inhalers both cure coronavirus and neutralize ozone with their fluorocarbon propellants, corticosteroid inhalers must be exempted from the 1987 Montreal Protocol on Substances that Deplete the Ozone Layer, and 1990 London Amendment, 1992 Copenhagen Amendment, 1997 Montreal Amendment, 1999 Beijing Amendment, and 2016 Kigali Amendment thereto, by the Ozone Secretariat.

Art. 6 Drug Resistance Propaganda

A. The World Health Organization vaccine development response to influenza and coronavirus outbreaks, is incompetent, has been wildly contagious, incurring significant, unnecessary morbidity and mortality, acutely noted in the coronavirus pandemic and corrupts the domestic public health service. Besides these highly contagious pandemics, the WHO also allows the United Nations to engage in alarmist propaganda that fails to prescribe the effective drug treatment for certain drug resistant diseases, of known cause, in order to declare a state of emergency, called drug resistance. The motive may be greed or impunity. Blaming an epidemic for evolving drug resistance is patently false. Untreated disease rages unchecked, sometimes similar pathogenic species require specific treatment regimes. There is no panacea, broad spectrum antibiotics do nothing for viruses, only the right treatment for a disease cures. If a health system declares themselves to be suffering from drug resistance, that probably means they don't know or have [perversely been forced to forget, the appropriate conventional pharmaceutical or natural remedy. It is best to adapt medical practice to find safe, effective and affordable natural home remedies, for most conditions, whether or not there exists competent pharmacy for the disease. In the invariably surgical case of kidney and gall stones the only effective medicine, that works overnight, is Stonebreaker (Chanca piedra).

1. Several comprehensive studies have proven the flu vaccine to be only about 5 percent effective during certain outbreaks and for all intents and purposes doesn't work at all. The right response to the persistent wet cough caused by influenza is to take a mentholiptus cough drop. Provided it contains eucalyptus flavoring, a mentholiptus cough drop almost always instantly cures influenza. Mentholiptus cough drops are therefore the frontline treatment for influenza pandemics. Prescription of Oseltamivir (Tamiflu), Zanamivir (Relenza) and Amantadine (Symmetrel) are also highly effective at curing influenza.

2. The safe and effective treatment for tardive dyskinesia (TD), a potentially lethal facial tic, also

known as the extra-pyramidal side-effect of antipsychotic drugs, is Cogentin (Benztropine mesylate). One dose of Cogentin cures the Parkinsonian facial tic, and the patient can continue to take the antipsychotic medicine without life-threatening side effect. Antipsychotic drugs have been cruelly designed to cause TD with one regular dose if the patient is not gradually weaned up to the regular dose. It is important to note that Amantadine (Symmetrel) does not work to cure TD as indicated by the FDA monograph. Cogentin is back on the market after being temporarily recalled for several deadly years, by its manufacturer.

3. Tuberculosis treatment became effective with the invention of the antibiotic streptomycin in 1946 and tuberculosis drug isoniazid (INH) in the 1950s. Nine months of the combination of INH and rifampin chemotherapy will result in roughly 95% cure rates. Therapy with INH, rifampin and ethambutol helps avoid the complication of drug resistance with non-tubercular mycobacterial disease. The addition of pyrazinamide can reduce treatment time to six months, but is toxic.

4. Antibiotic resistance claims in the news media and medical literature, frequently require qualification that certain reliable antibiotics have been tried in unadulterated form, and proven ineffective. Epsom salt bath, saline or chlorine swim sterilizes topical and musculoskeletal methicillin resistant *Staphylococcus aureus* (MRSA) infection. Doxycycline cures gastrointestinal MRSA, bubonic plague, Lyme disease (a leading cause of MS and ALS). It may take a few days to a week for the MRSA lesion(s) to completely subside. Doxycycline requires yoghurt to prevent gastrointestinal disturbance and may lead to antibiotic associated colitis caused by *Clostridium difficile*. Metronidazole treats antibiotic resistant *Clostridium difficile*, *Giardia lamblia*, the most common water-borne parasite in the Americas, and a host of other gastrointestinal infections other than MRSA. One should use a Sawyer mini 0.1 micron water filter or fresh home water filter, when suffering chronic diarrhea or drinking natural surface water. Pneumovax is said to be 80 percent effective at curing and preventing pulmonary and meningeal pneumonia for five to ten years, otherwise, Ampicillin, Amoxycillin or Penicillin is needed to treat Azithromycin resistant pneumonia.

5. The behavioral and psychological symptoms of dementia are irritability, agitation, aggression, hallucinations, delusions, wandering, disinhibition, anxiety, and depression. The madness poison has been identified as Dimethoxymethylamphetamine (DOM), or STP, it causes a three day panic attack without sleep, followed by a six month recovery from severe mental illness, if the delusional thoughts from the topical poison are not washed off with water. Antidepressant withdrawal can be dangerous. Pseudo-ephedrine and antidepressants makes a fine methamphetamine, and are collectively known as two bag meth. There are two drug abuse warnings regarding pseudo-ephedrine and stain drugs in regards to these Alzheimer's symptoms. One, pseudo-ephedrine like Claritin, Sudafed and Sudagent are indicated to treat viral and bacterial sinus infection, and are often used as speed by truck drivers, and postal workers, because they are a highly effective coronavirus cure, however pseudo-ephedrine dangerously shrinks the brain and makes a person, particularly a judge of law, functionally illiterate and if not taken at a reasonable hour causes maniacal insomnia. Pseudo-ephedrine is a key ingredient in fine coronavirus curing methamphetamine. Two, chronic opportunistic pneumococcal meningitis of the brain shrinking side effect results nearly instantly from statin drug consumption, unless the patient is vaccinated with Pneumovax. The brain is thought to take too long to heal from statin brain shrink for penicillin to prevent infuriating and delusional pneumococcal reinfection of the brain. Pneumovax must be required of all statin drug consumers, with a strong contraindication for Alzheimer's symptoms and impairment of mental faculties needed to throw away bad food and unwashable cardiotoxin contaminated fabrics, take antibiotics to treat or Pneumovax to prevent *Streptococcus pyogenes* and treat congestive heart failure caused by MRSA with doxycycline or Epsom salt bath sterilization followed by *Hawthorn*, the supreme herb for the heart, to eliminate lesions.

6. Purple Pitcher Plant (*Sarracenia purpurea*) poultice is reported to cure monkeypox, smallpox, other poxviruses, papovirus SV-40 and various herpes viruses, including papillomavirus and Epstein-Barr virus-associated carcinomas.

Art. 7 COVID Office Opening Protocol

A. Well-paid volunteers, trained in COVID hygiene, diagnosis and treatment, and supplied with medical necessities, are needed to experimentally reopen federal offices to the public pursuant to 24USC§422(d)(1) and the Nuremberg Code “Permissible Medical Experiments” Trials of War Criminals before the Nuremberg Military Tribunals under Control Council Law No. 10. Nuremberg October 1946 – April 1949, Washington. U.S. Government Printing Office (n.d.), vol. 2., pp. 181-182. The gold standard for SARS-CoV-2 diagnosis and treatment is hydrocortisone, eucalyptus, lavender, peppermint or salt helps water cure coronavirus colds.

1. The usual precautions of sneeze guards, vaccinations and face masks should be abided by, but are neither sufficiently curative nor preventive of coronavirus infection to warrant office reopening without further information. The most important thing is that everyone must know that if they have allergic rhinitis they almost certainly have COVID. The nose is far more sensitive and responsible to emergency medical treatment than a COVID test. It is not particularly dangerous to have allergic rhinitis, but untreated it can be deadly when the lungs fill up with fluid in severe acute respiratory syndrome (SARS).

2. Hygiene involving frequent wiping down of all surfaces and mopping with Lysol is the most effective and successful, commonly used method for keeping public spaces tolerable in restaurants, bars and cafes. The aromatherapy is curative, when used as directed wiping down surfaces or mopping, it is mildly toxic, and not very curative of coronavirus, to intentionally spray one's face with Lysol. The other effective method of environmental sterilization, that hasn't been widely used since the 1950s, is the eucalyptus scented humidifier. The eucalyptus scented humidifier, also known as a diffuser, has the advantage of being hands-free, and this is important in situations like offices, schools, and hospitals where people are often interact with people while distracted from constantly spritzing with Lysol. A eucalyptus scented humidifier provides both the water and eucalyptus that is needed to provide an environment that is curative of coronavirus.

3. Washing the nose and face is necessary to effect any coronavirus cure, whether the treatment is oral or topical. Submersing the head in water, especially saline or chlorine water, is instantly curative of coronavirus allergic rhinitis. Washing the nose and face with essential oil of eucalyptus, lavender or mint medicated soap is an effective treatment but often requires two applications to completely cure the nose. These medicated soaps help make showering a highly effective coronavirus cure. A dab of hydrocortisone creme to the nose cures coronavirus colds and two dabs of hydrocortisone creme to the chest cures severe acute respiratory syndrome (SARS). Hydrocortisone creme does not usually cause Cushing's disease when it is appropriately and curatively used, but can, and is not for habitual use. Mentholiptus cough drops or Echinacea pills are the safest and most effective treatments for SARS. For tobacco smokers menthol cigarettes, made from mint, are an effective remedy.

Art. 9 Immunization

A. There are a number of COVID-19 vaccines that have been approved – Pfizer-BioNTech, Moderna, Johnson and Johnson's Janssen in the United States; Pfizer-BioNTech, Novavax, Moderna, Astra

Zeneca and Janssen in the European Union. COVID-19 vaccines differ from the flu vaccine insofar that the COVID-19 vaccines do actually cure the coronavirus in about two weeks after vaccination and this does reduce severe illness and death in otherwise untreated patients, whereas flu vaccines don't work at all. Fatigue, coronary and thrombosis side-effect are so severe vaccination is not recommended for healthy individual, unless they are specifically having trouble treating coronavirus allergic rhinitis. A two week cure is woefully inadequate for the job of preventing the transmission of coronavirus, ending the global pandemic or truly protecting individuals from severe infection and death in the long run. The COVID-19 vaccines are falsely advertised as vaccines, although they have no pretense of preventing infection by immunity. Funeral directors embalming corpses in the United States have discovered high rates of previously unobserved fibrous clots resulting in a dramatic rise in all-cause mortality, they attribute to the COVID vaccination, in particular, the Astra-Zeneca vaccine. Having made an effort to win herd immunity the proper advertisement of COVID-19 vaccines is that they are a two week cure that should be administered to un-boosted patients admitted to clinics and hospitals with cold and flu symptoms in conjunction with the other swifter remedies in this treaty upon the gold standard for COVID-19 diagnosis and treatment – hydrocortisone, eucalyptus, lavender, peppermint or salt helps water cure coronavirus colds.

1. A great deal of responsibility for the ongoing pandemic stems from the immunization of vaccine manufacturers being abused to unfairly censure the competition. In the course of preventing “secret” information lawfully within the control of governments and governmental agencies from being disclosed pursuant to the protection of undisclosed information under Sec. 7, Art. 39 of the Trade Related Aspects of Intellectual Property (TRIPS) agreement and Arts. 2(1), 12, 58, 93(1) and 100(1) is certain to be sued for effective protection against unfair competition and control of anti-competitive and dishonest practices, of such as nature as to cause confusion, false allegations, or misinformation, in contractual licenses as provided in Art. 10 *bis* of the Paris Convention for the Protection of Industrial Property (1967). To ensure the people heed the gold standard for coronavirus diagnosis and treatment – hydrocortisone, eucalyptus, lavender, peppermint or salt helps water cure coronavirus colds - it is time for the United Nations to provide equal immunity with vaccines to prevent severe illness and death, to protect their practitioners against interference with family, honor, integrity, and correspondence or beheading pursuant to (Mark 6: 24), Art. 12 of the Universal Declaration of Human Rights, Vienna Convention on Consular Relations (1963), and Convention on the Privileges and Immunities of the United Nations (1946).

B. The Secretary-General of the United Nations, and Director-Generals of the World Health Organization, Pan-American Health Organization and World Trade Organization shall equally be the depositary of the present Convention. The Arabic, Chinese, English, French, Russian and Spanish texts of the present Convention shall be equally authentic. A State Party may denounce the present Convention by written notification to the Secretary-General or Director-Generals. Any State Party may propose an amendment to the present Convention and submit it to the Secretary-General, or Director-Generals. Reservations incompatible with the object and purpose of the present Convention shall not be permitted, and may be withdrawn. The present Convention shall be open for signature by all States as of 27 January 2022 and shall enter into force after the thirtieth day after the deposit of its twentieth instrument of ratification.
